Interested in gaining research experience in psychology and neuroscience?

The **Memory and Neuroimaging Lab** is recruiting new **Undergraduate Research Assistants**. We’re looking for motivated, responsible, and organized students to assist in conducting research on human memory.

**Undergraduate researchers in the lab:**
- interact with study participants
- collect psychological and brain (EEG & MRI) data
- learn about the practical and theoretical sides of research

This experience is especially helpful if you’re considering graduate school in a psychology- or neuroscience-related field. Researchers can receive 2-3 hours of course credit (**PSYCH 2950/4950**) for working about 6-9 hours per week throughout the semester.

If you’re interested in becoming a research assistant, contact Dr. Johnson at **johnsonjeffre@missouri.edu**.
